Dear Angel and Jane:

Thank you for your August 10, 2023 letter providing feedback on the proposed statewide pesticide notification system. We appreciate the continued engagement from your organization, the broader coalition and community representatives and farmworkers on our development of the statewide notification system.

We are currently exploring options to conduct beta-testing on the proposed notification system and look forward to engaging with you during this testing phase. We are additionally in the process of developing the proposed regulation to implement the notification system statewide and will be planning public hearings and a public comment period as part of the rulemaking process.

We are committed to developing a statewide system that increases transparency and provides advance, equitable access to pesticide application information. We look forward to continued conversations as part of our ongoing evaluation of the system.

Sincerely,

Karen Morrison,  
Chief Deputy Director and Science Advisor  
California Department of Pesticide Regulation
